

Project One Report

Project One took me a lot longer than I expected. This was my first time creating a plugin, so I made sure to take my time and be meticulous about it. I didn't add a lot onto it, but I made sure to follow the guidelines and actually create the code. I think the hardest part, for me at least, was actually designing the GUI and building the project. It took me a while to work out how to actually find where my project was being built, and once I learned that it made everything a whole lot easier. This was a pretty basic plugin, but at first it seemed very overwhelming. Now that I am done with it, I feel a lot more confident about my coding skills and about using JUCE and Xcode. I tried coding a smiley face into the GUI, but after about an hour of messing around trying to get it to work, I decided to scrap it for now as I couldn't get the :) to rotate. I hope that moving forward I will be able to do more with my GUI, but for now I'm pretty happy with my first plugin. Also, I didn't realize that the only way you could change the name of the Plugin was at the very beginning, so I apologize in advance for the title of NewProject.vst3, it was not intentional. The graph of my plugin should be in another file on this zip.
